DIA MUNDIAL EN LUCHA CONTRA EL CANCER

(4-FEBRERO)

La epidemia mundial del cáncer

La epidemia mundial de cáncer es de enormes dimensiones y se prevé que vaya en aumento. Actualmente mueren 8.8 millones de personas por esta enfermedad, incluyendo 4 millones de muertes prematuras (entre 30 y 69 años). Se estima que durante los próximos 10 años las muertes debidas al cáncer aumentarán hasta superar los 14 millones al año.

Por ello, necesitamos emprender medidas urgentes para crear conciencia sobre la enfermedad y desarrollar estrategias para hacerle frente. Las diferencias mundiales de acceso a la prevención, el tratamiento y los cuidados paliativos aumentan cada vez más rápido.

¿Por qué un Día Mundial contra el Cáncer

El Día Mundial contra el Cáncer se celebra todos los años el 4 de febrero y une a todo el planeta bajo un único lema para poner el foco en la lucha continua contra el cáncer. El objetivo de esta jornada es reducir el número de muertes evitables cada año a través de la concienciación sobre el cáncer en la población general, y presionando a los gobiernos para que emprendan más medidas contra esta enfermedad.

Transformar el dato de salud en evidencia y conocimiento clínico

El cáncer es una enfermedad que no tiene fronteras y que nos afecta a todos en algún momento de la vida, ya sea directa o indirectamente. Las acciones de cada individuo, de las organizaciones y de los gobiernos ayudarán a reducir la lacra del cáncer para conseguir el objetivo de reducción del 25 % de las muertes prematuras por ENT en 2025.

Esta enfermedad es una de las causas principales de muerte en todo el mundo, responsable de 8.2 millones de fallecimientos anuales, sin embargo, sabemos que un tercio de estas muertes se puede evitar y que muchos tipos de cáncer son curables si se detectan a tiempo. Hasta que se consiga crear una mayor conciencia sobre el cáncer y se emprendan acciones para prevenir esta enfermedad a escala mundial seguirán muriendo millones de personas al año en todo el mundo de forma innecesaria.

Cáncer en las Américas

En la región de las Américas, el cáncer es la segunda causa más frecuente de morbilidad y mortalidad, después de las enfermedades cardiovasculares, y es una base importante de las desigualdades en salud..

Se estima que 4 millones de personas fueron diagnosticadas en 2020 y 1,4 millones murieron por cáncer. Aproximadamente, el 57% de los nuevos casos de cáncer y el 47% de las muertes ocurren en personas de 69 años o más jóvenes, cuando se encuentran en lo mejor de sus vidas.

Tendencias futuras

A nivel mundial, se estima que hubo 20 millones de nuevos casos de cáncer y 10 millones de muertes por cáncer. La carga del cáncer aumentará aproximadamente en un 60% durante las próximas dos décadas, lo que afectará aún más a los sistemas de salud, a las personas y a las comunidades. Se prevé que la carga mundial por cáncer aumente a unos 30 millones de nuevos casos para 2040, y el mayor crecimiento se producirá en países de ingresos bajos y medianos. Si no se toman medidas para prevenir y controlar el cáncer, se prevé que el número de personas que serán diagnosticadas con cáncer aumentará en un 57%, lo que significa aproximadamente 6,2 millones de personas para 2040 en la Región de las Américas.

El cáncer puede prevenirse y controlarse

El cáncer puede prevenirse y controlarse implementando estrategias basadas en la evidencia para la prevención, tamizaje y detección temprana del cáncer, el tratamiento y cuidados paliativos. Los factores de riesgo modificables más comunes para el cáncer, comunes para muchas otras enfermedades no transmisibles, son:

Consumo de tabaco

Baja ingesta de frutas y verduras

Consumo nocivo de alcohol

Insuficiente actividad física

Algunos factores de riesgo específicos para el cáncer incluyen las infecciones crónicas por virus del papiloma humano (HPV) -para cáncer cervicouterino-, hepatitis B o C - para cáncer de hígado-, y H pylori -para cáncer de estómago.

De un tercio a la mitad de los casos de cáncer pueden prevenirse reduciendo la prevalencia de los factores de riesgo conocidos. El control del tabaco y la vacunación contra VPH son ejemplos de intervenciones. La prevención primaria del cáncer más eficaz se basa en enfoques de todo el gobierno, con legislación, regulación y políticas fiscales combinadas con actividades para cambiar el comportamiento individual y de la comunidad. Los mensajes de salud pública y la promoción de la salud deben presentar evidencia sobre factores de riesgo específicos.
